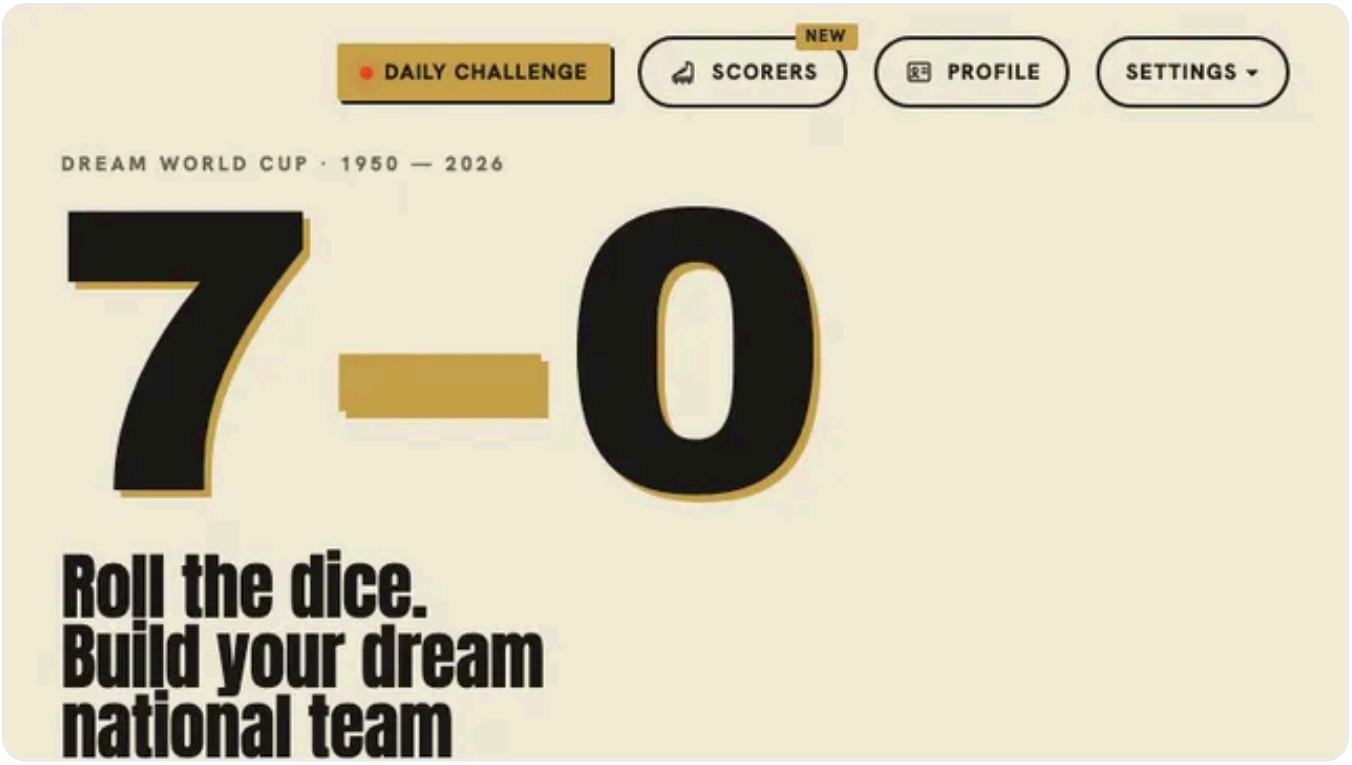
7a0

Daily World Cup squad builder where you roll for a nation, pick real legends, and see if your team can win 7–0.



About

7a0 is a World Cup squad builder that turns football history into a daily game. Each round gives you a national team and a World Cup from 1950 to 2026, then asks you to build a full XI using players who were actually there and simulate the result. The goal is simple: assemble a dream national team strong enough to win 7–0. You can play the daily challenge, switch to free mode, and compare squads with friends while exploring hundreds of teams and thousands of players.

What is 7a0

7a0 is a World Cup squad builder and simulation game built around real tournament

you to fill an 11-player lineup with stars who were actually part of that event. After you build the squad, you run a simulation and see whether the team can win 7–0.

The concept is part quiz, part football nostalgia, and part lineup puzzle. 7a0 covers World Cups from 1950 through 2026, so the game spans decades of international football rather than focusing on one era. The site also frames the experience as “Sete a Zero,” which matches the 7–0 objective in the interface.

Key features

7a0 focuses on a narrow but distinctive World Cup squad builder loop:

- **Daily challenge** that gives you a fresh team-building puzzle.
- **Free mode** for more open play beyond the daily round.
- **Real-player constraint** so you must choose footballers who were actually at that World Cup.
- **11-position squad building** that pushes you to complete the full lineup.
- **Simulation step** that shows whether your chosen squad reaches the 7–0 target.
- **Historical scope from 1950 to 2026**, which gives the World Cup squad builder a long timeline to draw from.
- **Profiles and settings** in the interface, suggesting the app supports basic user-side customization.
- **New scorers** and shared squad context, which point to a game layer beyond a simple static quiz.

The site also exposes scale data that helps explain the depth of the World Cup squad builder: 56 national teams, 302 squads, and 7,004 players.

How to use it

Using 7a0 is straightforward, but the challenge comes from football knowledge and squad balance rather than from interface complexity.

1. Open the daily challenge or switch to free mode.
2. Roll the dice to receive a national team and a World Cup edition.

Fill out all 11 spots in the squad.

Run the simulation and check whether the lineup can win 7–0.

A practical way to approach the World Cup squad builder is to start with the most obvious legends, then fill the remaining positions with players tied to the same squad or tournament. Because the game asks for real participants, your success depends on both historical knowledge and roster logic.

Who it is for

7a0 is a good fit for people who enjoy football trivia, historical rosters, and lineup-building games. It should appeal to:

World Cup fans who know major squads across multiple decades.

Players who like daily puzzle formats with a single repeatable objective.

Users who enjoy comparing all-time legends such as Pelé, Maradona, Messi, Ronaldo, and C. Ronaldo in a tournament context.

People who prefer a World Cup squad builder over a general-purpose football manager.

Groups of friends who want a lightweight competitive game rather than a long sports simulation.

The app also has an educational angle because it nudges players to learn which stars appeared in which World Cups, not just which players are famous overall. That makes the World Cup squad builder useful for fans who want to test memory as much as taste.

What to know before you use it

7a0 is built on historical data, but it is still a game, not an official football database or rules engine. The simulation is designed around the site's own 7–0 challenge, so it should not be treated as a real match predictor or a source for authoritative tournament records.

A few caveats matter before you rely on the World Cup squad builder:

Player ratings are internal to the game. The site even invites users to disagree with a rating, which means the numbers are part of the gameplay, not a neutral record.

Availability is limited to the app's dataset. If a player, squad, or tournament detail is missing, the game cannot invent it.

The app does not replace official football sources. For confirmed rosters, appearances, and tournament history, use FIFA or other primary references.

The challenge is opinionated by design. The goal is to build a team that can win 7–0 inside 7a0's rules, not to produce the mathematically best real-world XI.

The experience depends on historical coverage. Because the app spans 1950 to 2026, some eras will feel more familiar than others, and that affects how easy the World Cup squad builder is for different users.

If you want a football game that mixes trivia, squad construction, and simulation, 7a0 is a focused World Cup squad builder with a clear gimmick and a deep historical player pool. Use it for fun, and check official sources when you need factual certainty about World Cup squads or appearances.

FAQ
